

Unheaded — Service Ontology · Overview + North Star (tabs below hold detail per subsystem)

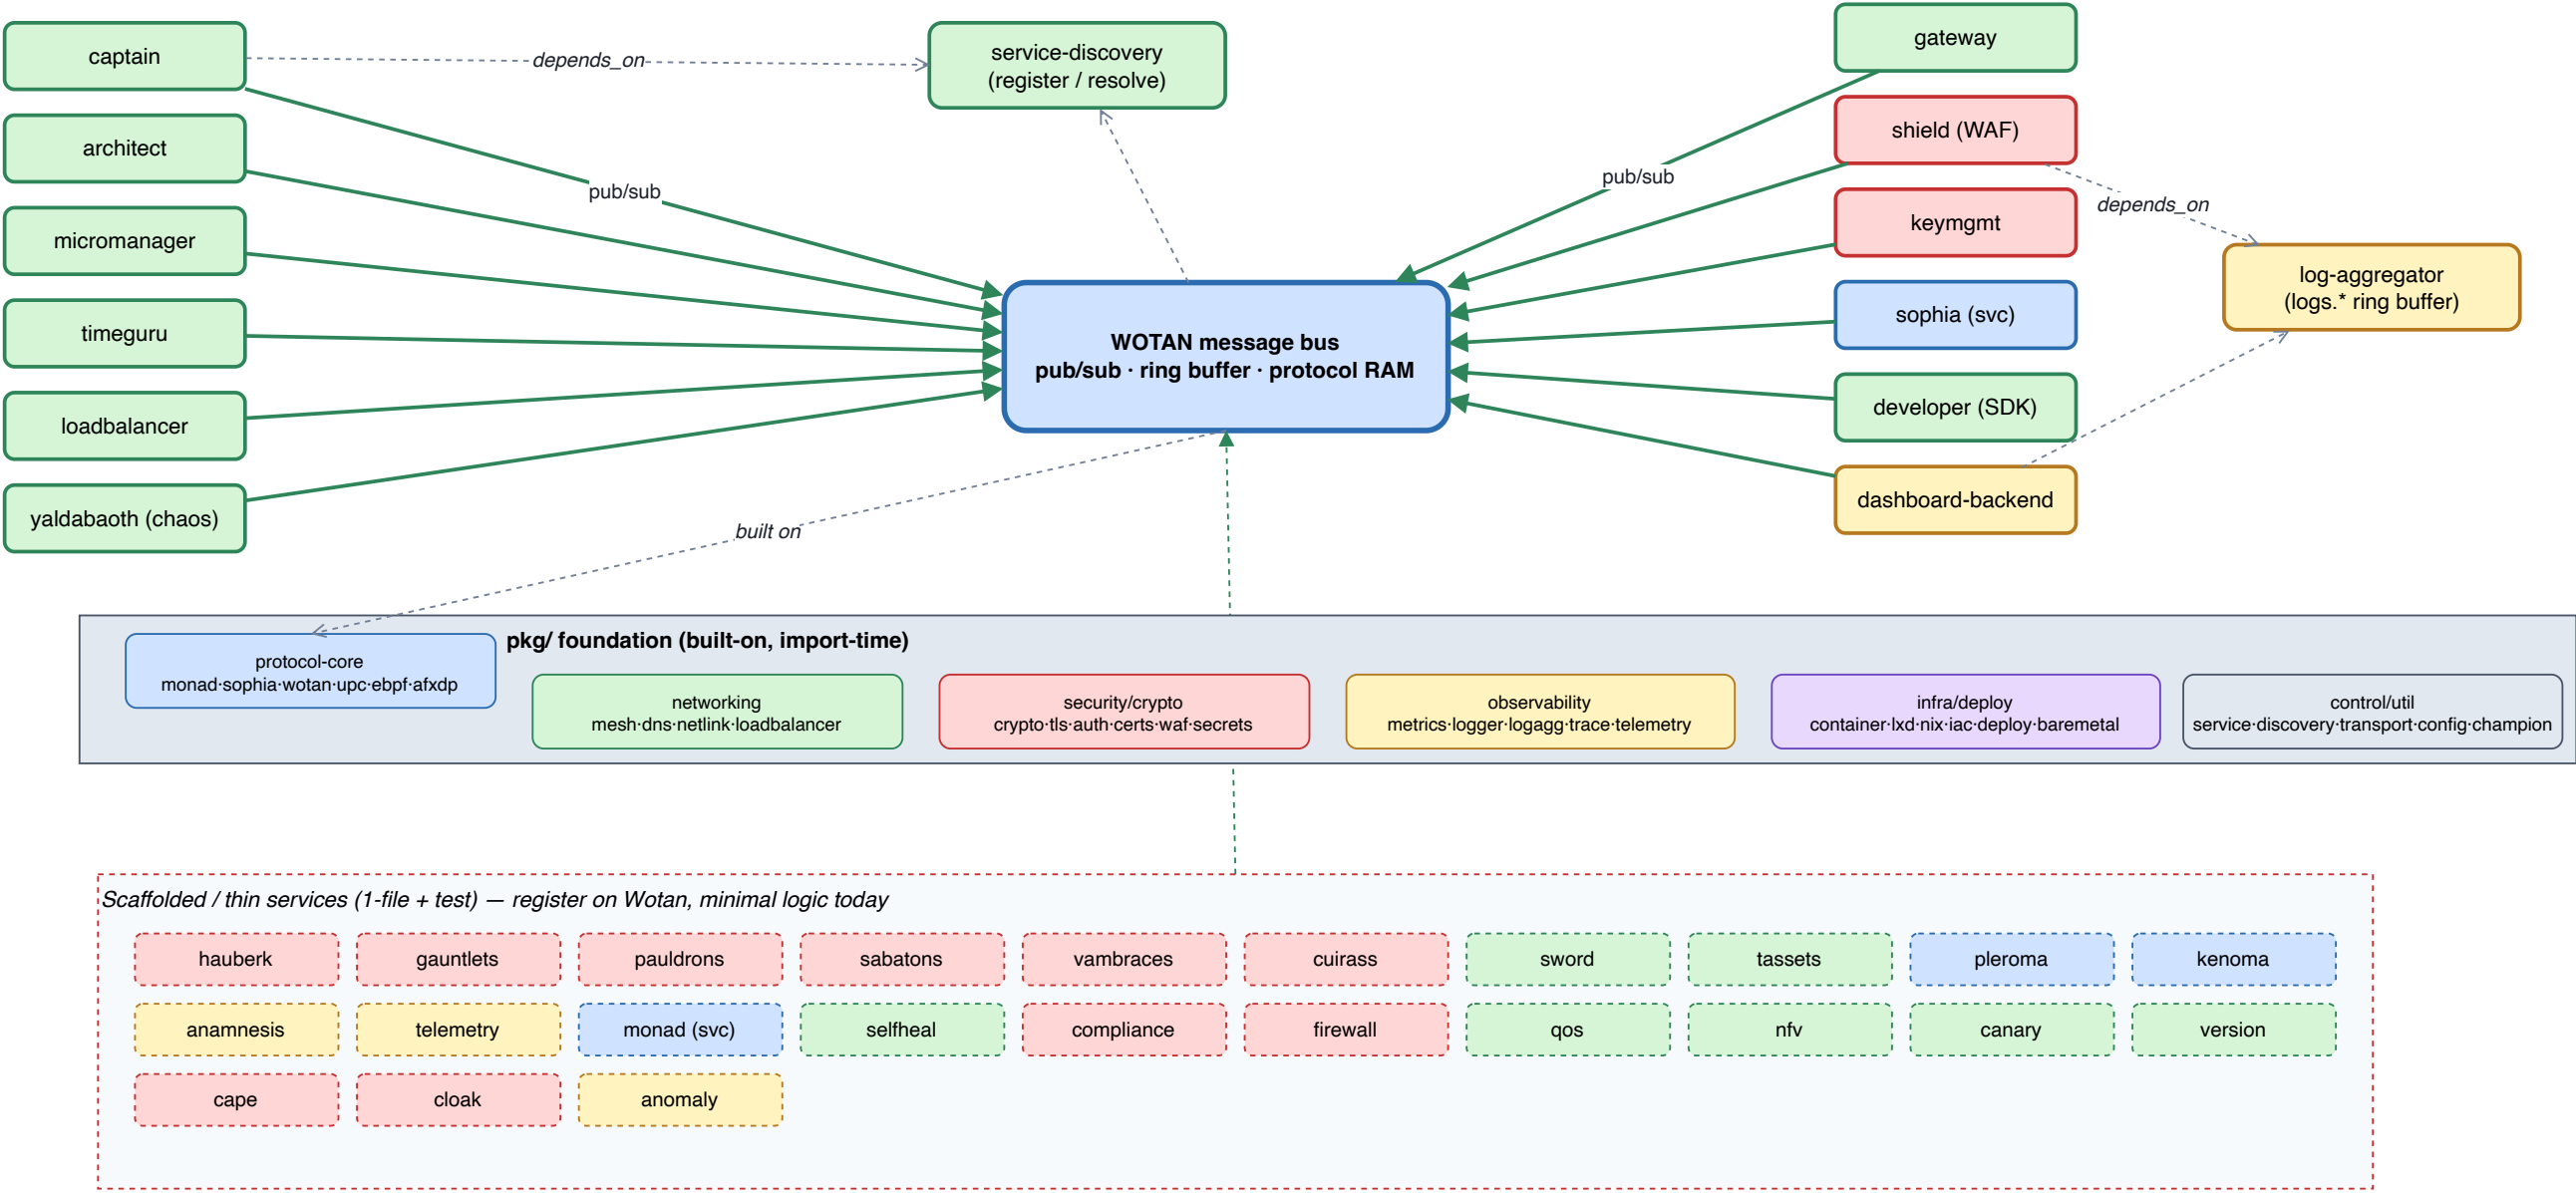

Maturity: [solid border] = built today [dashed] = scaffold / partial [dotted border + italic + (FUTURE) tag] = future / vision (pipe dream)

Edges: green = Wotan pub/sub · gray dashed = depends_on / bundling · blue = protocol data-plane · purple = UPC boot · teal = knowledge/training/drives · red dashed = attacks · orange dashed = red/blue handoff

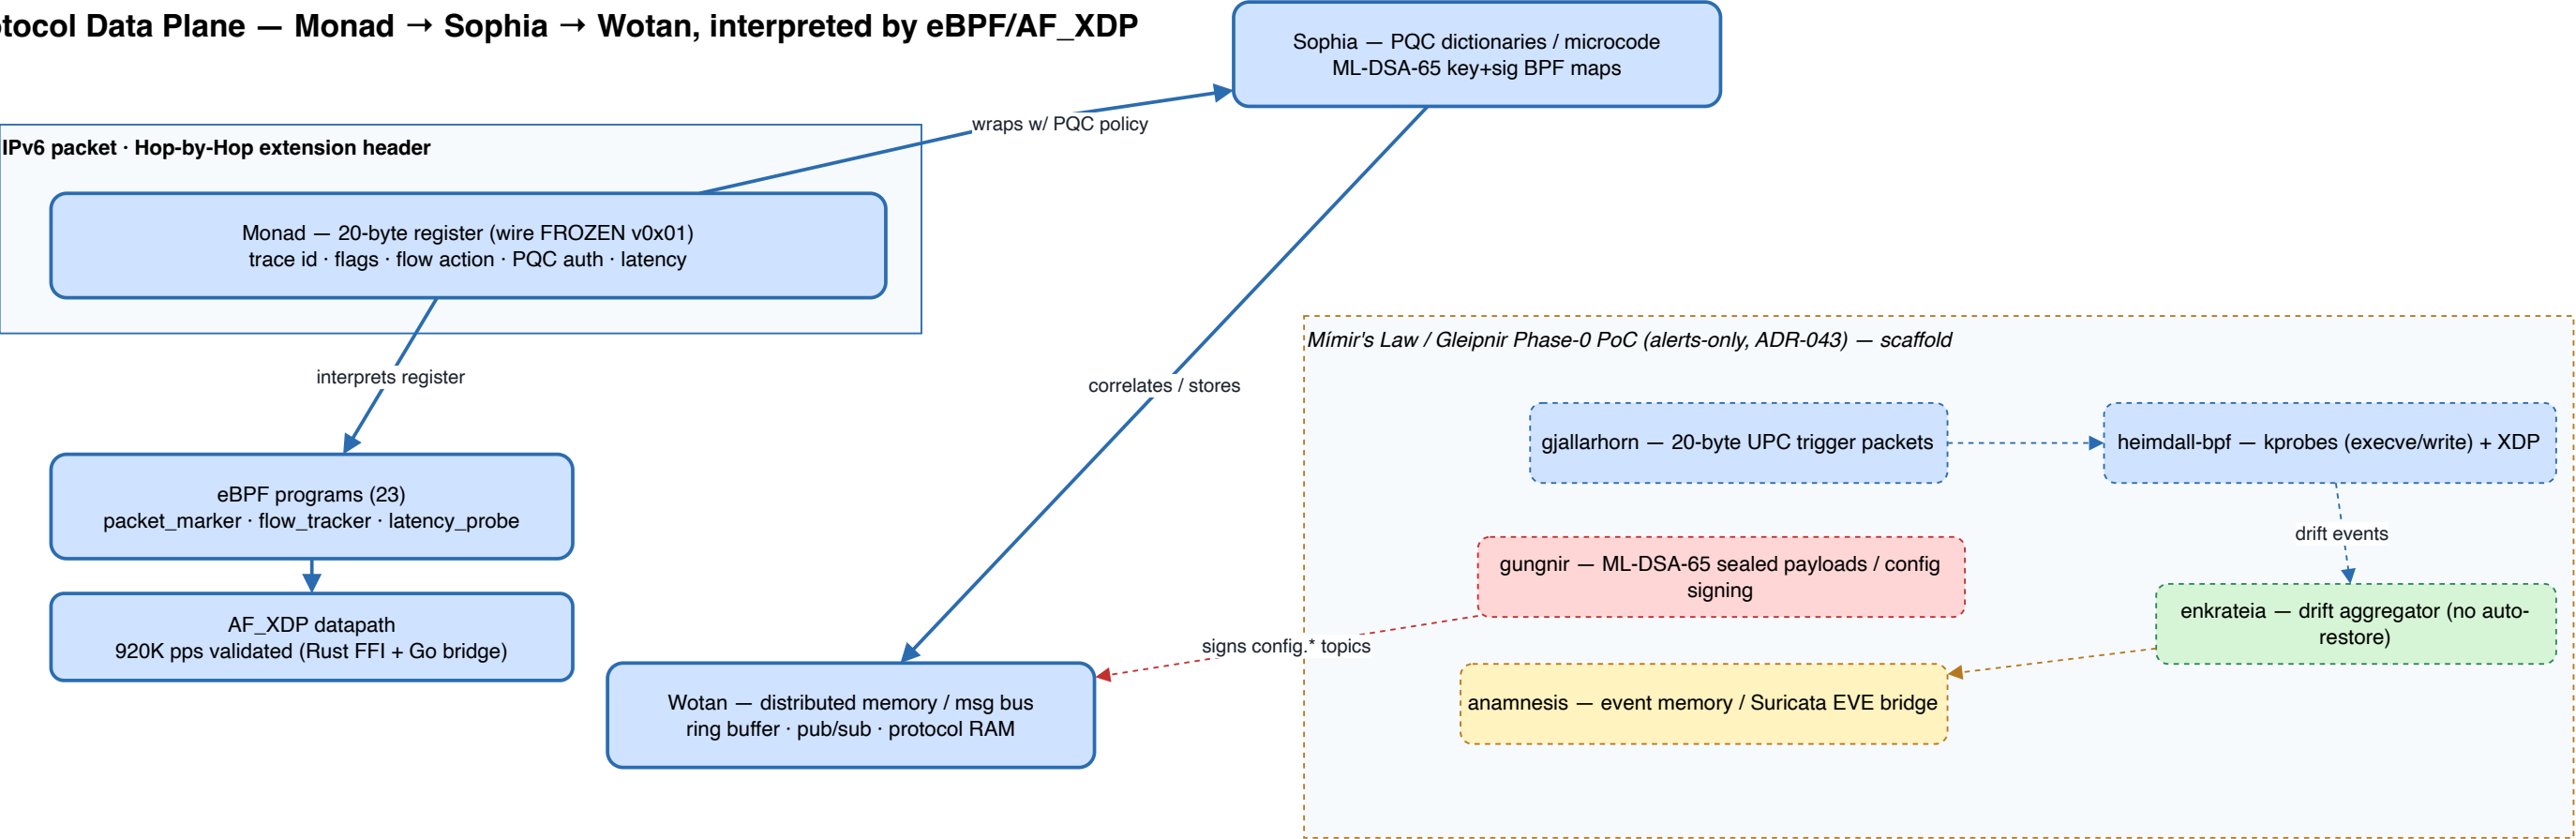

Service Mesh — runtime interaction (Wotan message bus hub + depends_on)

Note: only built services drawn with individual pub/sub edges. All 34 register via system.discovery; foundational service-discovery + log-aggregator carry most depends_on.

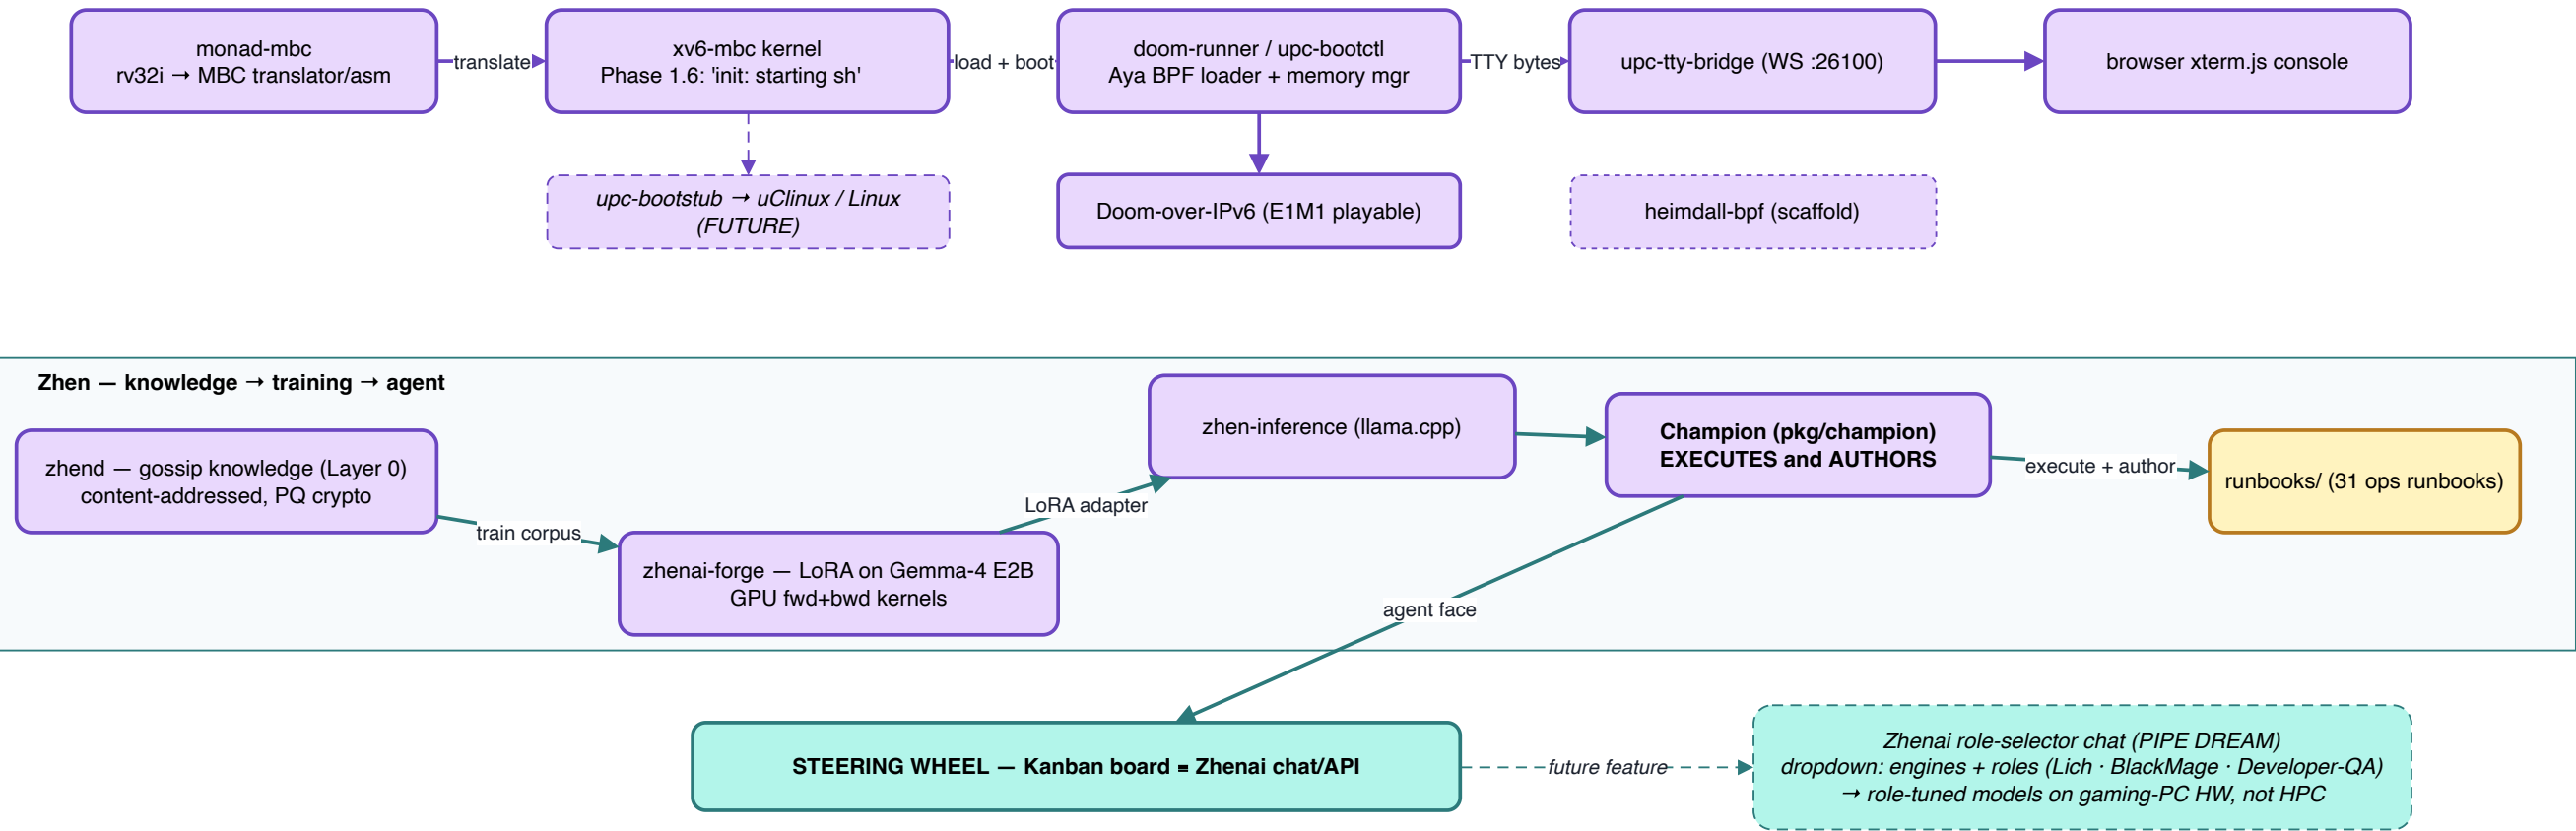

green=pub/sub · gray dashed=depends_on/built-on | border: solid=built, dashed=scaffold

Protocol Data Plane — Monad → Sophia → Wotan, interpreted by eBPF/AF_XDP

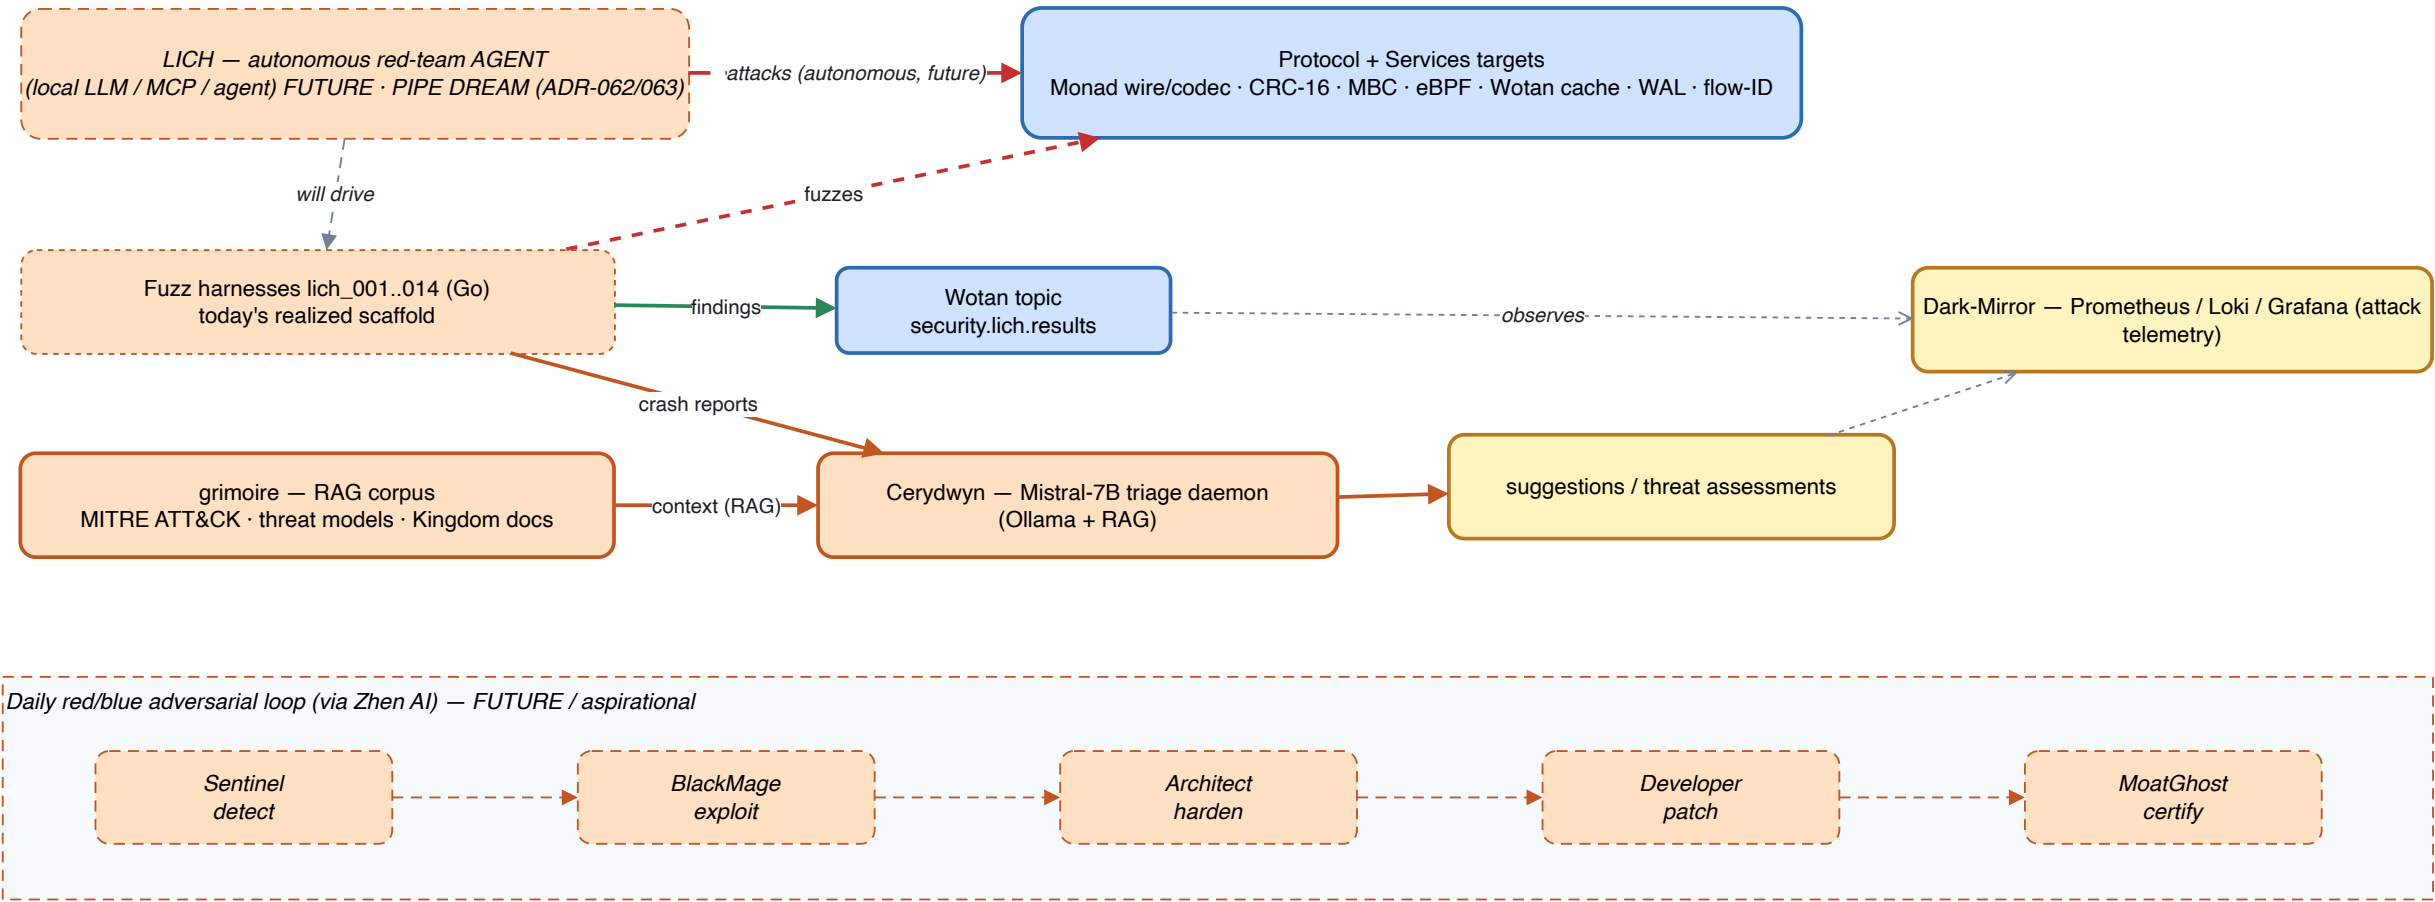

UPC / Crates boot pipeline + Zhen knowledge/agent branch

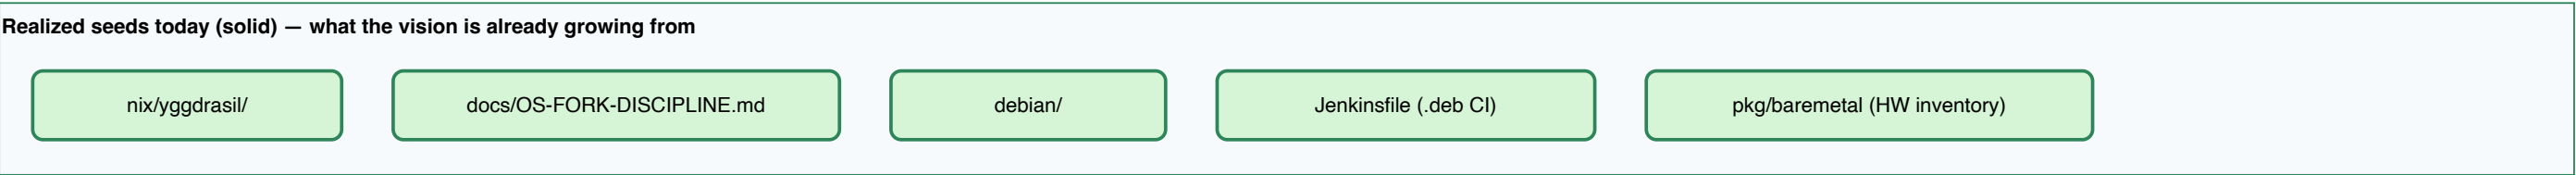

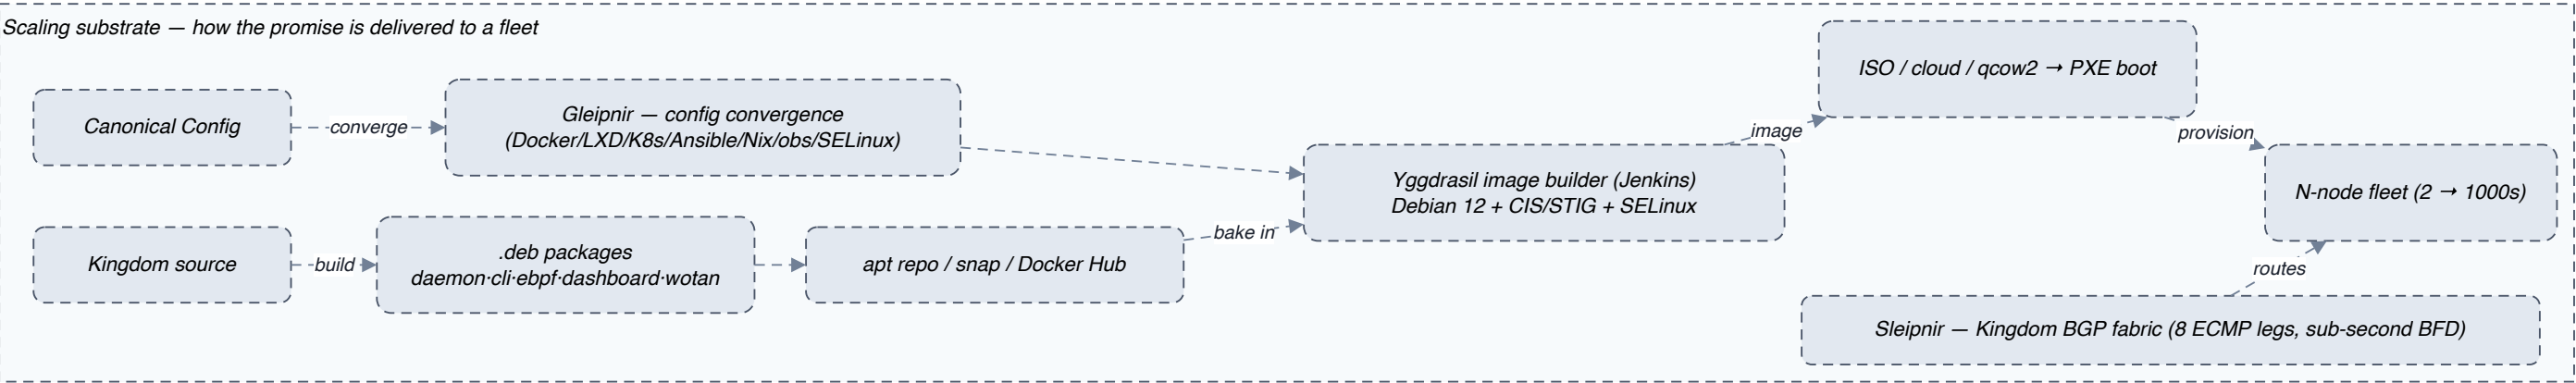

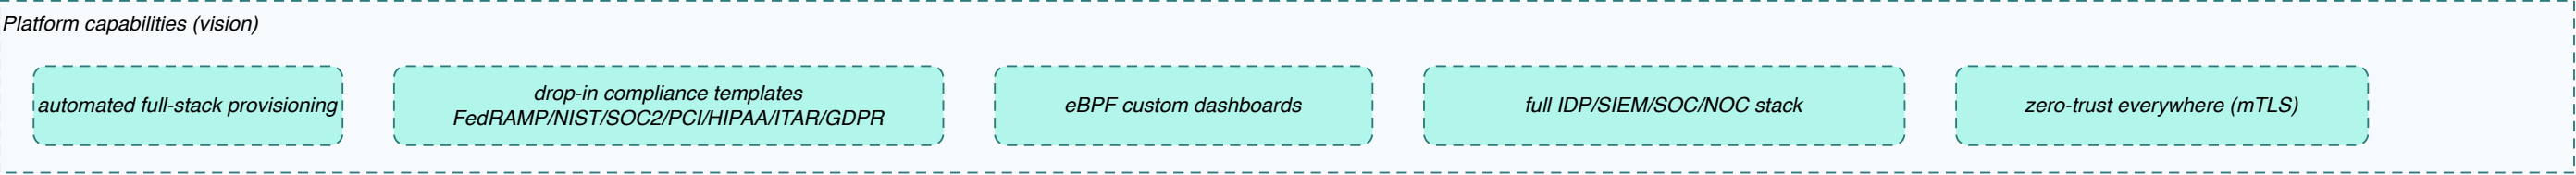

purple = UPC boot pipeline · teal = knowledge/training/drives · border: solid=built, dashed=scaffold, faded=future

Tomb — Red-Team loop (LICH agent = future; fuzz harnesses + Cerydwyn = today's scaffold)

red dashed = attacks/fuzzes · orange = red-team data-flow · orange dashed = red/blue handoff (future) · border: solid=built, dashed=scaffold, faded=future

North Star — Yggdrasil PXE substrate + Sleipnir/Gleipnir + platform capabilities (all FUTURE / Age 2-3, Q4 2026+)
